Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Wood WI; Watanabe CK, Smith V, Gurney AL, Baker K, Goddard A, WPI; 2000-237871/20. P-PSDB; AAY99416. New mammalian DNA sequences encoding transmembrane, receptor or secreted PRO polypeptides, useful for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interactions.

Claim 2; Fig 153; 773pp; English.

AAA37022 to AAA37144 encode the new isolated human transmembrane, receptor or secreted PRO polypeptides given in AAY99340 to AAY99465. The transmembrane and receptor PRO proteins can be used for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interactions. The polypeptides and nucleotide sequences

These proteins and the DNA encoding them may be used as hybridization probes, in chromosome and gene mapping and in the generation of antisense RNA and DNA. They may also be used used to generate either transgenic animals or knockout animals which are in turn useful for development and screening of therapeutically useful reagents. The nucleic acids may also be used in gene therapy	Query Match Best Local Similarity 99.9%; Pred. primers for PRO polypeptides of the invention. The sequences of the primers for PRO polypeptides of the invention. The sequences of the invention can be used to detect the presence of a tumour in a mammal by comparing the level of expression of a PRO polypeptide in a test sample of cells from the animal and a control sample of normal cells, whereby a comparing the level of expression in the test sample indicates the presence of a tumour in the mammal. Mammals included ogs, cattle, horses, sheep, pigs, goate and rabbits but are preferably human. The polypeptides can. be used to stimulate tumour necrosis factor (TMP) alpha release from human to be used to stimulate the proliferation of determine the presence of tumours and also susceptibility to tumour development, particularly adrenal, lung, colon, cuest, prostate, rectal, cervical, or liver tumours, in mammalian subjects. The oligomicleotide probes specific for the PRO nucleic acids can be used to determine the presence of tumours and also subjects. The oligomicleotide probes specific for the PRO nucleic acids can be used for genetic analysis of individuals with genetic disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     molecular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence is the coding sequence for a human PRO polypeptide (secreted and transmembrane). The PRO protein, and PRO agonists, PRO antibodies are useful for preparation of a medicament useful in the treatment of a condition which is responsive to the PRO protein, agonists, antagonists or anti-PRO antibodies. The PRO protein may also be employed as molecular weight markers for protein electrophoresis. The PRO coding sequence has applications in molecular biology, including use as hybridisation probes, and in chromosome and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Eighty four nucleic acids encoding PRO polypeptides, useful in molecul
biology, including use as hybridization probes, and in chromosome and
gene mapping.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AGAGAAAGAAGCGTCTCCAGCTGAAGCCAATGCAGCCCTCCGGCTCTCCGCGAAGATT

New isolated secreted and transmembrane PRO polypeptide useful for modulating biological activity of a cell, or for treating sports-related joint problems, osteoarthritis or rheumatoid arthritis.

Claim 2; Fig 107; 399pp; English.

The invention relates to an isolated secreted and transmembrane PRO polypeptide having 80 % sequence identity to a sequence appearing as polypeptide having 80 % sequence identity to a sequence of an extracellular domain of the proteins with their associated signal peptide. Or lacking its associated signal peptide. Also included are the nucleic cardis encoding the proteins, whether host cells, fusion proteins and antibodies which specifically bind to the proteins. The proteins are useful for detecting a polypeptide designated as A, B, C or D in a sample useful for detecting a polypeptide designated as A, B, C or D in a sample compared of the conjugate in the sample, where the formation of the conjugate is significative of the presence of an A, B, C or D polypeptide in the sample, where the formation of the conjugate is significative of the presence of an A, B, C or D polypeptide, C is a prologoptide, P is a PRO19760 polypeptide, E is a prosocial polypeptide and I is a PRO1930 polypeptide. The E, F, G, H or I polypeptide is labeled with a detectable label or is attached to a solid support. The proteins are useful for linking a bioactive molecule of a polypeptide designated as B, C or D or E, F, G, H or I polypeptide is a polypeptide designated as A, B, C or D or E, F, G, H or I polypeptide is paleled with a detectable label or is attached to a solid support. The proteins are useful for linking a bioactive molecule Hor I. The bioactive molecule is a toxin, a radiolabel or an antibody. The bioactive molecule causes death of the cell. A, B, C, D, E, F, G, H, or I, or antibodies against them are useful for modulating a biological activity of a cell expressing a polypeptide designated as A, B, C or D or E, F, G, H, or I. The cell is killed. The proteins are useful for or D or L, or an antibody. to a cell H or I. Th

Novel human secreted and transmembrane protein PRO1568 cDNA.

Homo sapiens.

(first entry)

11-AUG-2003

ACA90404;

ACA90404 standard; cDNA; 2397 BP.

AK050737	
rocus	AK050737 2491 bp mRNA linear HTC 20-SEP-2003
DEFINITION	Mus musculus 9 days embryo whole body cDNA, RIKEN full-length
	enriched library, clone: D030012P12 product: TETRASPAN NET-2 homolog
	[Homo sapiens], full insert sequence.
ACCESSION	AK050737
VERSION	AK050737.1 GI:26341473
KEYWORDS	HTC; CAP trapper.
SOURCE	Mus musculus (house mouse)
ORGANISM	Mus musculus
	Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
	Mammalia; Eutheria; Rodentia; Sciurognathi; Muridae; Murinae; Mus.

This is a long-transcript enriched cDNA library (Genome Res. 11: 153-1558 (2001). [PMID: 11544199] From WA01
cell line. Undifferentiated human BS cell line WA01
line. Undifferentiated human BS cell line WA01/H1
was obtained from WiCell Research Institute, Inc.,
Madison, Wi, cultured according to their instructions, on
MEF feeders. They formed round colonies with defined edges
and were positive for alkaline phosphatase, SSBA-4, OCT3,
OCT4, REXI, UTF, TERT, SOX2, CAT3 and CX45. They are negative for GATA, GATA4, DEXI, NCAM, MSX1, FID3, SSBA-1,
TUBB3, NSS, GFAP, and EOMES. When confluent (18-10 days after plating), the ES cells from 4 K Gem dishes were treated with 1 mg/ml collagenase, type IV
(Invitrogen/GIBCO) for 5-10 min and gently scraped off with an purified with TRI20! Reagent from Invitrogen. Protocol ref: Genome Res: 11: 1553-1558 (2001). [PMID:11544199]) Double-stranded cDNAs were synthesized with an OligodGT) Primer [Invitrogen: and synthesized with an OligodGT) Primer [Invitrogen: and 3.49 of total RNA, treated with T4 DNA polymerase, and

The cDNAs were ligated to Lone-linker LL-S14, purified by phenol/chloroform extraction, and separated from free linkers by Centricon-100 column. Then, the cDNAs were amplified by long-range high fidelity PCR using Bx Taq polymerase (Takara) with a primer Sa14-S for 25 cycles. The products were purified by phenol/chloroform extraction and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         /organism="Homo sapiens"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              엄
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      8
UI-CF-EC1 is a normalized cDNA library containing the following tissue(s): Normal lung from adult and from fetal day 64, day 87, week 19 and week 42. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dr primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Nor I, and cloned directionally into pT7T3-Pac vector. The oligomocleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (GT) R tail. The sequence tag for this library is
                                                                                                                                                                                                                                                   AAGTGCTTAC.

This is the 5' sequence of the clone insert
Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
Research Center (DKFZ); Email s.wiemann@Akfz-heidelberg.de;
sequenced by Qiagen (Hilden/Germany) within the cDNA sequencing
consortium of the German Genome Project.
No sl sequence available.
This clone (DKFZp686P12555) is available at the RZPD in Berlin.
Please contact the RZPD: Ressourcenzentrum, Heubnerweg 6, 14059
